

IMMUFLORA

Friendly bacteria play an important role in the defense of the gut, where they are needed to control other less friendly bacteria and disease producing yeast and pathogens. They are also needed to help in the digestion of food, manufacturing of essential vitamins and in preventing cancer-causing chemicals from forming. A lack of friendly bacteria in the gastro-intestines may result in gas, bloating, intestinal and systemic toxicity, constipation, diarrhoea, overgrowth of candida, malabsorption of nutrients, irritable bowel syndrome, allergies and liver problems, etc.

Unfortunately, friendly bacteria are destroyed by stress, poor diets, antibiotics, the absence of bacteria food, as well as other factors.

In order to keep our bodies healthy and immunity strong, it is essential that we supplement our diet with large numbers of the major friendly bacteria of the gastro-intestinal tract, i.e., Lactobacillus Acidophilus and Bifidobacteria, together with the prebiotic Fructo-Oligosaccharides.

BENEFITS

- Creates a healthy intestinal environment and prevents growth of parasites and harmful bacteria
- Promotes healthy liver and improves the immune system
- Improves digestion and nutrient absorption
- Detoxifies and strengthens the intestinal tract
- Promotes normal bowel movement
- Prevents turista and combats food poisoning and diarrhoea

KEY FEATURES

A product of Japan, NewLife™ Immuflora:

- Contains 10 billion viable cells of Bifidobacterium Longum, 1 billion Lactobacillus Acidophilus and 200mg Fructo-Oligosaccharides, a bacteria food that is crucial in enhancing and protecting the friendly organisms in the gastrointestinal tract.
- Is created with breakthrough technology to withstand stomach acid and emerge intact in the intestines.
