

K-SALT

The importance of potassium to the tissues is as calcium is to the bones. Potassium is the mineral of youthfulness and it keeps the arteries soft and flexible. Many exhibit signs of premature ageing due to potassium deficiency. Potassium is indispensable in tissue/protein synthesis and enzymatic processes. Potassium deficiency usually leads to metabolic disturbances, edema (water retention), copious phlegm, high blood pressure and many other degenerative & chronic diseases. Potassium deficiency can also stunt growth and cause mental retardation and senility.

Due to the consumption of common salt (sodium) in our normal diet which results in a depletion of potassium, almost everyone is deficient in potassium. To reconstruct healthy cells and tissues, potassium must be restored to the body's systems.

Nature's Gift K-Salt from NewLife™ is a special potassium formula developed by Dr. Max Gerson (MD) who was widely known for his cancer therapy. Dr. Max Gerson had performed more than 300 experiments before finding the right potassium combination in K-Salt. It is specially formulated to effectively restore potassium to the body.
