

VITAMIN B COMPLEX

MAL No: MAL20001951X

B vitamins play a vital role in keeping our health on a straight track. Deficiency in B vitamins often produces symptoms of fatigue.

Due to excessive processing of food, the supply of B vitamins from food sources has become scarce. Furthermore, stress, insecticide residue, pollutants in the air and water, smoking, alcohol, drugs, laxatives, antibiotics, antidepressants, estrogen (as in HRT), anti-gout, anticoagulant – all these are vitamin robbers and deplete B vitamins from the body. Since B vitamins are water soluble, it is imperative that a sufficient daily supplement is taken.

A good Vitamin B Complex must have all the right amounts of individual B vitamins synergistically combined for optimum benefits.

BENEFITS

- Helps to maintain the health of the body
- Involved in energy production and helps to overcome fatigue
- Needed for blood formation

KEY FEATURES
